PROFILE SUMMARY

Final-year Computer Science undergraduate at Amrita Vishwa Vidyapeetham with background in algorithms, machine learning, systems, and software engineering. Experienced in applied research and development, with multiple co-authored publications.

EDUCATION

B. Tech (Computer Science), Amrita Vishwa Vidyapeetham CGPA : 8.25	2022 – 2026 Amritapuri, Kerala
Secondary Education, The Indian High School - CBSE Senior Secondary: 90% aggregate - CBSE Secondary: 89% aggregate	Dubai

INTERNSHIP

Cognizant, Programmer Analyst Trainee - Designed and deployed a full-stack logistics management application using a microservices architecture, with a React frontend, Spring Boot backend, and MySQL database - implementing RESTful APIs, service decomposition, and end-to-end client-server integration.	03/2026 – 06/2026
--	-------------------

PROJECTS

CLI Tool (Command-Line Utility) : Control and Manage Queues - A lightweight CLI-based queue management tool to perform core operations using Golang. - Enabled efficient task handling and monitoring through command-driven controls, providing a simple interface for managing background job workflows and improving operational visibility.	2026
One Digest – AI-Powered Newsletter App - Addressed the need for personalized content curation by building an AI-powered newsletter platform that adapts to user interests. Designed and deployed a full pipeline developed using Flutter and integrated Firebase. - OpenRouter AI models, and SendGrid automation to personalize content, generate summaries, and deliver dynamic newsletters.	2025
Distributed Server Architecture for Multiplayer Gaming - Engineered a 3-tier server architecture with matchmaking and WebSockets for state management. - Achieved a ~3× reduction in avg. RTT under heavy load (259ms→78ms approx.) compared to monolithic models, demonstrating the system's scalability and responsiveness for real-time gameplay.	2025
ML-Based Online Safety Dashboard for the Elderly - Developed an ML-powered interactive tool to improve online safety awareness for elderly users, featuring dynamic visualizations, dataset exploration, and personalized risk predictions with confidence scores.	2024

PUBLICATIONS

GNNREC++ : Multi-View Graph Neural Network Recommender, ICCIS'25 -BITS Goa Proposed a dual-branch GCN framework leveraging user-item and item-item graphs, integrating adaptive attention fusion and Personalized PageRank re-ranking to balance short-term interests with long-term preferences while enhancing diversity and personalization in cold-start scenarios.	2025
Dual-Stream Deep Learning Model for Cloud-Based Steganalysis, IEEE ICCNT 2025 -IIT Indore Proposed a dual-tower neural network combining ResNet-34 and Spatial Rich Models for detecting steganographic threats in cloud images. Achieved 81.5% clean image recall and strong detection reliability in adversarial image datasets; optimized for real-world cloud deployment.	2025

SKILLS

Programming Languages: Java C++, C, Golang, Python.	Tools & Platforms: Spring Boot, Git, GitHub, SQL/NoSQL, Jupyter Notebook, Google Colab, Firestore, SendGrid, Creative Cloud Suite, PyTorch, PyTorch-Geometric, Scikit-learn, OpenRouter, MCP.
